For this assignment you are to read and review 5 simulation articles. The articles must meet the following criteria:

- Published by the Winter Simulation Conference – dates 2009 - 2013
- Article describes an ACTUAL simulation project conducted

The links below will lead you to the Conference site and to the publications. If you cannot answer the questions below for a particular article, choose a different article.

I will choose one of your articles for you to make a presentation to class later in the semester. Do not work together to pick the same articles or you will have to do additional research for the presentation.

http://wintersim.org/2014/
http://informs-sim.org/

For each of the articles write an article summary in the following form and containing the specified information. Start each summary on a new page. Must be written in word processor with single spacing, Times New Roman font size 12. Each part MUST be written in complete sentences with correct grammar & punctuation. Each numbered part below is to be a separate, well-formed paragraph. No quotes are allowed. If you copy verbatim any part of the article, you will receive a zero on this assignment. ~ Read the article then write the answers to the questions below IN YOUR OWN WORDS. If you have doubts about plagiarism, see the slides posted on my web site.

Your Name
Article Name
Article Authors
Conference Date of publication

1. Name and Describe the real-world system that was simulated.
2. Who did the simulation? (University, company, etc.)
3. Describe how data was collected
4. Was there a model other than the computer program? If so, describe.
5. Describe what methods (software, programming language, etc.) were used to develop the simulation.
6. Describe the results.
7. Was the simulation considered successful? How were the results used by the real-world system?
